DETAILED ACTION

Claim Objections

1. Claim 14 is objected to because of the following informalities: It appears to be a duplicate of claim 1. Appropriate correction is required.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-14 are rejected under 35 U.S.C. 102(a) as being anticipated by the Synopsys design compiler tools.
3. As per claim 1, in operating the Synopsys design compiler tools within an apparatus which comprises of computational device such as a computer, workstation or server, said apparatus then have the ability to generate timing information of a functional block, comprising of the following functions:

identify intra-block input stage sequential circuits and intra-block output stage sequential circuits by comparing logical connection information with a library in which cells used for designing the functional block are registered, said intra-block input stage sequential circuits being placed in the functional block and contributing to information exchange with extra-block input stage sequential circuits outside said functional block through input pins, said intra-block output stage sequential circuits being placed in the functional block and contributing to information exchange with extra-block output stage sequential circuits outside said functional block through output pins, and the logical connection information describing connection relationships between circuit components

Art Unit: 2182

constituting the functional block, between the circuit components and the input pins and between the circuit components and the output pins;

calculate delay timing comprising of first delay times from the input pins to the intra-block input stage sequential circuits in accordance with timing constraint

information describing timing constraint on said functional block, and second delay times from said intra-block output stage sequential circuits to said output pins; and

output timing information including the first delay times and the second delay times.

4. As per claims 2-14, please see claim 1 in view of Synopsys design compiler tools operating within an apparatus.

Regarding the reference to the Synopsys design compiler tools website, please note to view the following links on the figure of design compiler family to further understand the rejections:
